

OUR COMPANY

eNano Health has been developing a series of non-invasive self-health management solutions making it easier for individuals to stay healthy and improve quality of life.

Our products, P4 Tests, are built on a platform technology based on multiple patents, aiming to deliver self-health management on the P4 (Predictive, Preventive, Personalized, and Participatory) medicine principle. The easy-to-use self-testing solutions empower users to be able to regularly monitor the changes of various biomarkers in the body so that they can become aware of the developing health risks at an early stage or monitor the improvements after adopting healthy lifestyles. Other P4 test packages for wellness and health risks such as diabetes, prediabetes, cardiovascular problems, stroke, nutritional health, and viral defense are also available as separate or supplementary to this Vaccine Testing Package.

Address: Unit 623, Biotech Centre 2
No. 11, Science Park West Avenue
Hong Kong Science Park,
Pak Shek Kok, New Territories,
Hong Kong

Telephone: +852 2210-5022

PATENTS, TRADEMARKS GLOBAL AWARDS & RECOGNITION

- 2012 Best Emerging Technology Award, IBM SmartCamp Kickstart Miami
- 2014 Gold Medal Winner and Award from the China Delegation Team, 42nd International Invention Exhibition at Geneva
- 2015 Technology Achievement, Hong Kong Awards for Industries
- 2016 EY Accelerating Entrepreneurs
- 2017 Problem Solver Award, Global Sources Startup Launchpad
- 2017 Asia-Pacific Self-Health Management Enabling Technology Leadership Award, Frost & Sullivan
- 2018 APAC Outlook 50 Most Promising Enterprise Startups
- 2020 Outstanding Self-health Management Concept Award, ET Net

COVID19

P4 Test Series

Vaccine Testing Package

Know your Health & Vaccine

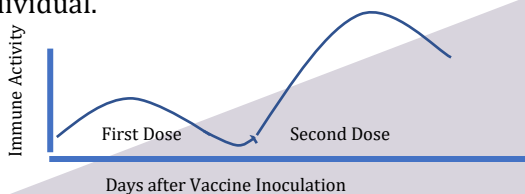

To Vaccinate or Not To Vaccinate?

Having been fighting the Coronavirus pandemic for over a year, COVID-19 vaccines, which have been regarded as the ultimate defence and protection solution, have finally emerged. While the vaccines have been made available to more and more countries, many people may still be pondering over their safety and effectiveness.

How Does the Vaccine Work?

COVID-19 vaccination commonly consists of two doses inoculated 3-4 weeks apart, to allow time for the body to generate a corresponding immune response. The vaccine utilizes our ability to develop immunological memory to confer immunity. The first dose primes the immune system defence program by introducing “simulated” COVID-19 viral parts into the body. The second dose or booster, if administered within the appropriate window, will stimulate memory cells of the immune system to relaunch the programmed defences to deliver a more long-lasting and powerful protection for the individual.

Is the Vaccine Safe for Me?

Vaccine manufacturers undertake rigorous clinical trials to validate their vaccine’s safety and efficacy to meet the standards for granting use authorization set by local regulatory agencies (e.g., the U.S. FDA). Even after approval for use, the vaccines are still continuously being monitored to ensure prompt and appropriate address of any new issues that arise.

Despite all the efforts in safety and quality control, individuals should carefully review the safety guidelines and recommendations from the vaccine manufacturers. Patients with known chronic (e.g., coronary artery disease, diabetes) or acute (e.g., fever or other flu like symptoms) health problems should always consult with a physician regarding their suitability of taking a specific vaccine. Moreover, patients should avoid inoculation if their immune system is already pre-occupied by undiagnosed asymptomatic health issues or acute illnesses.

Our Pre-Vaccine Test

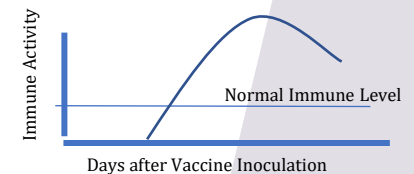

eNano Health offers a Pre-Vaccine Test which consists of two saliva-based tests for users to use three to four days before vaccine administration. Our pre-vaccine test analyses the immune system activity level. A positive result indicates a high level of immunological activity, implying the immune system is already stressed. A stressed immune system will increase the likelihood of health complications. Users may consider deferring the vaccination until the test levels are no longer elevated and their immune system is no longer stressed. If the levels do not return to normal after repeated Pre-Vaccine tests, the user should seek professional medical advice.

Is the Vaccine Effective for Me?

Efficacy and effectiveness data published by vaccine manufacturers are based on statistical sampling. Neither of those numbers will accurately define your personal vaccine risk and effectiveness, which are dependent on your own immune response.

Our Post-Vaccine Test

eNano Health offers a set of saliva-based Post-Vaccine Tests for monitoring changes of user’s immune system activity levels during the several days after vaccination. As proven in our studies, an elevated immune activity is usually detected 3 days after the second dose. This positive response indicates a successful immune reaction to the vaccine. If your test result is negative (i.e., no immunity activity elevation), you may not have received the full COVID-19 vaccine protection from your 2 shots. Please follow up with your healthcare provider for appropriate follow-ups.
